1 Administrative Topics

• Please remember to fill out the course evaluations.

• We need to schedule a review. We can do it in the Bob’s classroom any time.

2 Debugging

• Errors that prevent the code from running (e.g. syntax errors)

• Errors that cause the program to crash

• Errors that cause the program to produce the wrong output (e.g. logic errors)

In class, we will come up with a list of common problems and use it to review some of the material in the class.
