

Lecture 15: Lists and memory

- Copying basic types in a list (via slicing):

nums = [1, 2, 3]

Sliced = nums[:2]

- Copying objects in a list (via slicing):

turtles = [turt 1, turt 2, turt 3]

turtSlice = turtles[:2]

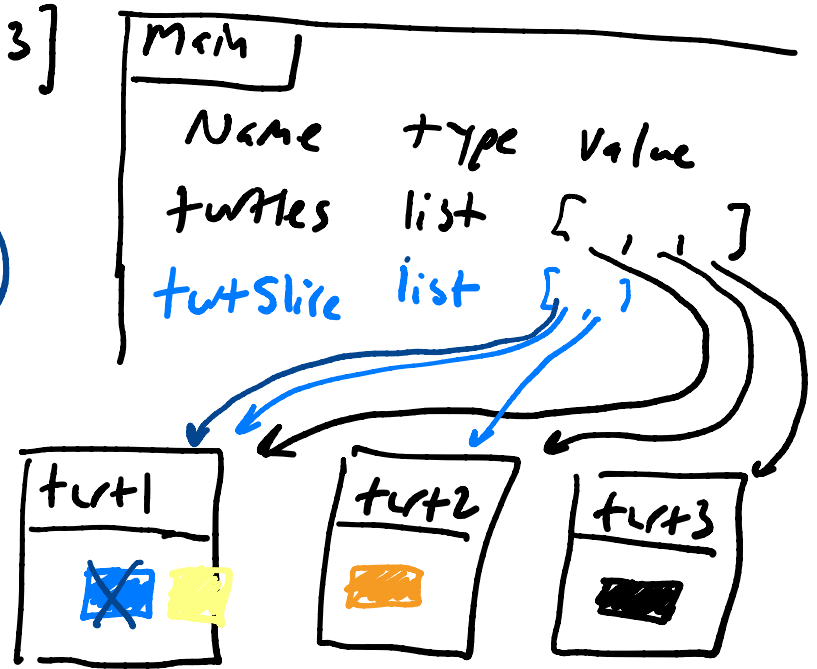

Turtle objects have own symbol tables

turtles = [turt 1, turt 2, turt 3]

turtSlice = turtles[:2]

turtSlice[0].color('yellow')

turtles = [turt 1, turt 2, turt 3]

turtSlice = turtles[:2]

turtSlice[0].color('yellow')

turt3 = turtles[1]
