Brief History of Programming Languages

First high-level languages
Computers powerful enough to compile programs

Prototypes for each of the language paradigms (imperative, functional, logic)

Focus on programming large-scale systems
Internet Era
IDE's, garbage collection, scripting languages
Parallel (e.g. taking advantage of multi-cores)
First high-level languages
Computers powerful enough to compile programs

Prototypes for each of the language paradigms (imperative, functional, logic)

Focus on programming large-scale systems

Internet Era
IDE's, garbage collection, scripting languages

Parallel (e.g. taking advantage of multi-cores)
• New languages are developed to accomplish specific tasks or to take advantage of new computing power or technologies

• Over your career, you will likely need to learn many languages (some old, some new)

• Learning new languages is faster if you understand the principles behind them (what is common, what the technical terms are, how they can be formally defined)

• C is here to stay, is close to the hardware (which means it can be super efficient), so it is important to learn it
What do we do in CS333?

✧ Generally speaking, we do two things in CS333

- **Learn C** language

- **Inspect the fundamentals** of programming languages
  - Use **C Lite** (a lite version of C) to study the theoretical problems
  - Use **C/Java/Python** for the practical problems

✧ Ultimate goal: know how to **learn a new programming language easily** and **write more efficient programs**
Coursework & Evaluation

Weekly Projects: 45%

- **Eight projects**: five of them are bi-weekly projects, and the rest three are weekly projects.

- **The usual deadline is the Thursday midnight (for weekly projects)**

- Every project has **two parts**: C language part (individual work) and the selected language part (can collaborate with a partner from project 2)

- **Late submission** will receive a **maximum score of 26/30**.

- **One four-day extension** for you to use at your discretion over the semester (except the final project)

- Submit your source code and README file to [filer.colby.edu](http://filer.colby.edu) and your write-up on [Wiki](http://Wiki)
Coursework & Evaluation (cont.)

- A handful of homework assignments: 10%
  - Assigned some Wednesdays, and the deadline is the following *Friday at the beginning of the class*.
  - **Hard deadline.** We discuss the solution in Friday's class, so late submission will not be accepted.
  - **Graded in a binary fashion:** hand in a reasonable attempt before deadline, you get a 1, otherwise a 0.
  - Email your homework to me with the subject in the format “CS333 HW#” (e.g., CS333 HW1).
Coursework & Evaluation (cont.)

• A handful of quizzes: 15%

  • 10-15 minute in class quiz, on some Fridays

  • Each quiz may be made up when a prior request is made or there is a documented health issue. Please contact me immediately in the event of illness and other unforeseen circumstances, we will work out accommodations.

  • The lowest quiz grade will be dropped.
Coursework & Evaluation (cont.)

- Final Exam: 20%
  - Oral; finish it individually; no make-ups
  - Details will be given in the last class.

- Participation: 10%
  - You are expected to attend every lecture and actively join the class discussions
  - If you have to miss one or more lectures for any reason, please let me know in advance. I'm happy to work with you and direct you to the lecture notes and coursework.
  - Lecture notes will be posted in the Notes section of the course webpage few hours after the class.
  - Don’t hesitate to come to my office hours or email me. I'm happy to help if you let me know your questions.
  - Participation also includes asking for help from the TAs.
How to Succeed

✧ **Projects:** Start working on the projects as early as possible. Ask the TA and me for help if you need. Talk with your peers about the course concepts.

✧ **Homework:** Homework assignments help you self-check your understanding of the course contents and prepare you better for the quizzes. You are strongly encouraged to try out the homework questions before reading my homework solutions.

✧ **Quizzes:** Study for the quizzes by doing the homework assignments. The lowest quiz grade will be dropped. So, your grade won't be affected by that single underperformed quiz.

✧ **Participation:** Be active in class, asking questions and joining discussions. Come to office hours. Ask Ying or TAs for help.

✧ **Final Exam:** Learn your selected language and C language well enough during the semester to feel comfortable talking about these languages. Start working on the exam early after it's assigned.
Help Outside of Class

✦ Stephanie's Office Hours (Davis 112)
  • Monday 4-5pm
  • Tuesday 1-2pm
  • Wednesday 8:30-10pm
  • Thursday 12-2pm

✦ TA Session in Davis
